Topic

Task:

You will need to use last lesson (PowerPoint is still on the website), the information from this lesson and any of your own research to create a poster about the three different types of rock.

Remember:

- A title
- Subheading for each rock – sedimentary, metamorphic and igneous.
- In each section tell me: which rocks come under those headings; how they may be formed, what uses there are for them; and information such as whether it is hard or soft/permeable or impermeable.

You may design it however you wish.
